CHALK LINE REELS
DANDEE-CHALKED

Used Extensively for Marking Loading Docks and Platforms

The Dandee reel permits no snarled lines or binding spools. Case has been recessed, thus providing spaces in which the spool revolves. This construction prevents the line from climbing the spool's edges, assuring level winding always. Also, the shaft on which the spool turns has bearings at both ends which further prevent wobbling and make a true, free turning spool.

The line is always chalked when drawn from the reel. The supply of chalk within the case will last for a year of normal use. When reloading is necessary, simply apply the blade of a screwdriver against the cover and use the adjusting nut for a fulcrum. Proper tension on the line, as withdrawn or reeled back, is maintained by simply adjusting with the fingers the threaded nut through which the line passes.

No. 43—100 ft. line .....Per dozen **$15.00**

No. 44—50 ft. line .....Per dozen **12.00**

CHALK LINE REELS
DANDEE-UNCHALKED

The line, after using, can always be drawn back into the case, protecting it against damage from other tools in the tool box. Proper tension on the line as withdrawn or reeled back is maintained by a tension spring working against a tension nut. The tension nut is simply adjusted by the fingers for any amount of tension desired for your purpose. The line will never tangle or snarl.

No. 42—100 ft. line . . . . . Per dozen **$15.00**
